

Day : Apr 14

1) what is Git?

Ans:- Git is a version control system used to track changes in code.

2) what is GitHub?

ans:- GitHub is a cloud platform where you store and share Git repositories online.

3) Difference : Git vs GitHub

Ans:-

Git	GitHub
* Software	online Platform
* works locally	works online
* Tracks Changes	Stores & Shares code.

4) what is Staging area?

Ans:- It is a temporary area where files are kept before committing.

* Flow :- working $\rightarrow$ staging $\rightarrow$ commit

5) what is commit?

A commit is saving changes with message.

* `git commit -m "Added login page"`

6) what is branch?

A branch is a separate version of code.

* used to work on features without affecting main code.

7) difference : git pull vs git clone?

* git clone :-

- First time download
- creates new repo

* git pull :-

- update existing project.
- update current repo.

8) what does git add do?

adds all files to staging area.

q) use of git status?

ans:-

- changed files
- staged files
- untracked files.

10) what is origin?

ans:- origin = default name of remote repository (GitHub link).

CSS:-

1. what is CSS?

Ans:- CSS (cascading style sheets) is used to style web pages.

Ex: colors, layout, fonts.

2) Type of CSS?

Ans:-

1. inline CSS

Ex:- `< p style = "color: red;" > Hello/p`

external CSS :

Link rel="stylesheet" href="style.css"

what is CSS selector?

* used to select HTML element.

types:-

* Element $\rightarrow$ P

* Class $\rightarrow$.Box

* ID $\rightarrow$ #header

* Universal $\rightarrow$ *

why "cascading"?

Because styles are applied on priority order (cascade rules)

what is specificity?

* It decides which style is

applied.

* Priority:-

• ID > Class > Element.

6) CSS Box model?

ans:- 4 Parts

* Content

* Border

* Padding

* margin

7) margin vs padding?

Ans:-

Margin

* outside space

* Space between
element

Padding

Inside space

Space ^{inside}
inside element

8) what is flex box?

Ans:- * used for 1D layout (row or column)

(Ex:-) display: flex;

9) what is CSS Grid?

Ans:- * used for 2D layout (rows + columns)

Difference:-

- flex box $\rightarrow$ one direction
- Grid $\rightarrow$ two direction.

10) what is `1fr` and `repeat()`?

- Ans:
- * `1fr` $\rightarrow$ 1 fraction of space
 - * `repeat()` $\rightarrow$ repeat column/rows

Ex: grid-template-columns: repeat(3, 1fr);

11) position property values?

- Ans:
- * static (default)
 - * relative
 - * absolute
 - * fixed
 - * sticky.

12) what is z-index?

Ans: * Controls layer order (which element is on top)

* works only with positioned elements.

13) Pseudo-class vs Pseudo-element

Ans:-

Pseudo-class	Pseudo-Element
* State : hover	Part of element :: before

14) Transform vs Transition?

ans:-

Transform	Transition
* Change shape/ position transform: scale()	Smooth animation transition: 0.5s

15) What is media query?

Ans:- * used for responsive design
(mobile, table, desktop)

Ex:-

```
media (max-width: 600px) {  
  body {  
    background: red;  
  }  
}
```
