Task → 1

① what is ~~HTML~~? website vs webpage?

Ans :-

* websit is collection of webpages. there are 2type. * Static websit * dynamic website. Static buid in Static webpages. the Something dynamic webpages.

* website are collection of webpags.

* webpage collection of code.

when come to the Static collection of Code. HTML, CSS, bostStart these are the languages to make a Static webpage

* Dynamic are contan HTML, CSS, bostStart, JSS. So the webpags are Collection code is the webpage singel webpage.

3) what is HTML?

Ans :-

HTML Stands for Hyper text mark language it is the foundation of every website HTML is not programmi language it is a markup languge use

to struture content on the web. using HTML we define heading, Paragraphs images. link

4) what is extension?

Ans :-

The extension tells the operating system and the web browser that the file contains Hyper text Markup Language. when a browser sees a html file, it knows to interpret the code (The tags like <h1> or <p> and render it as a visual webpage instead of just showing a wall of text.

5) what is html stands for?

Ans:

HTML stands for Hyper text text mark up language. it not a progaming language it is markup langug
