LOTUS

Day-6.

1) what is form. why we use?

Ans:

form are used to collect user input and send the data processing to server. with out form website only dispdly and not active with users. from always users to register, completed payment and ect. form are toget and send databased the server.

2) what is input? why we use?

Ans:-

~~From~~ form elements (inside the <form> <input/> every input is inline. each input has a more attributes & value to get the quality data. to get the datas send inside the form element - to send data to action Page - with a methods of get or post

3) what is select and why we use and what is option?

Ans:-

The <select> tag acts a container or a wrapper. it tells the browser. "I am about to provide a list of choices for the

user. "But itsef, it doosit show any choices it just creates the box that users click on to open the menu.

* option.

The <option> tag are individual items inside that list. Every choice you want to give the user must be wrapped in its own <option> tag.

* speed,
* saves space * prerents errors *

4) ~~what~~ what is the use of value?

Ans :-

In the context of HTML forms, the value attribute is the actual data send to server when a user submits a form. While the text between the tags is what the human sees on the screen, the value is what the computer processes.

5) what is the use of label? and what is the use of placehalder?

Ans : * <label>

The <label> is the permanet tittle of an input field. it tells the user exactly what information is required

LOTUS

* Placeholder = "

A placeholder is light-grey "hint" text that sits inside the input box before you start typing.
