

3. Logical : ~~88~~ !!

true ~~88~~ False = false

Difference between == and ===

* == $\rightarrow$ checks value only.

* === $\rightarrow$ checks value + type.

5 == "5" = True

5 === "5" = false.

what is a function? why use it?

* A function is a block of code that performs a task.

why use:

* Reuse code

* organized code.

* Reduce repetition

function to add two numbers?

function add(a, b) {

return a + b;

}

console.log(add(2, 3));

9) what is an array?

ans: An array stores multiple values in one variable

```
let arr = [1, 2, 3, 4]
```

10) How to access array elements?

ans: * using index (starts from 0)

```
let arr = ["a", "b", "c"];
```

```
console.log(arr[0]);
```

ans: a

11) what is an object?

ans: * An object stores data in key-value pairs.

(Ex):

```
let person = {
```

```
  name: "John",
```

```
  age: 25
```

```
};
```

Access object values?

```
console.log(person.name);  
console.log(person["age"]);
```

what is an array of objects?

* An array that contains multiple object.

```
let users = [  
  { name: "A", age: 20 },  
  { name: "B", age: 25 }  
];
```

Loop to Print names?

```
for (let i = 0; i < users.length; i++) {  
  console.log(users[i].name);  
}
```

5) Difference : Array vs object?

Array	Object
* users index	uses keys
* ordered	unordered
Ex: [1, 2, 3]	(name: "A")
