

* useState :
useState is a React Hook used to create and manage state in function components.

Syntax :

`const [state, setState] = useState(initialvalue)`

- state $\rightarrow$ current value.
- setState $\rightarrow$ function to update value
- initialvalue $\rightarrow$ starting value.

Key Points :

- * state is dynamic (can change)
- * useState helps manage state.
- * updating state re-renders the UI
- * used for inputs, buttons, API data etc.

Short * state is used to store dynamic data in a component, and useState is a React Hook used to create and update state.
